Google Scholar © 1996-2014, Amazon.com, Inc. or its affiliates Auditorium of the Metallurgical and Materials Engineering Department Cidade Universitária, São Paulo, Brazil View on Map well as the performance of plant and their corresponding spray systems. The content of the book covers the needs of practising engineers from different disciplines, who may include project managers, and works, maintenance and design engineers. It addresses the lack of in-depth understanding, in the area of the application of sprays in industry. Of interest to researchers is the field of liquid sprays; the fundamental processes involved are discussed, including outlines of contemporary and possible future research and challenges in the different fields of application." "Wherever possible guidance is given in respect to the analysis and interpretation of experimental data obtained using different measurement techniques in industrial spraying processes." "Jacket. Dryer atomizers and prilling towers are industrial plants used to make powders and microcapsules by atomizing liquids which are then dried, frozen, coated or encapsulated. During spray drying, the liquid is sprayed "atomized" into droplets by means of a rotating disk SPRAI sprayer in a vertical cylindrical chamber, in contact with a stream of hot air, in order to evaporate the liquid. "water. The droplets are then dried to a dry powder before falling on the lower walls of the cylinder. The separation of the powder and the moist air then takes place in cyclones. During freezing by atomization, the liquid is heated and then sprayed "atomized" into droplets by means of a SPRAI sprayer with a rotating disc in a vertical cylindrical chamber, in contact with a current of cold air, in order to freeze the droplets before falling on the lower walls of the cylinder. Carnauba wax obtained with the SPRAY process SPRAI designs and markets spraying equipment and / or complete systems (towers) using rotary or vibro-rotary sprayers SPRAI intended for: The manufacture of dry particles by drying by atomization process The manufacture of solid particles by freezing by atomization process Carnauba wax SPRAY is a manufacturer's design office specializing in rotating disc spraying. Depending on your needs, it: Provides a standard device Adapts a standard device to your application Make a custom device Develops all engineering Do all the engineering Provides turnkey installation.
